**SPRING
2017
SERVICES**

**Available across
North Dakota**

Optimize your yield and maximize your profit

Our service provides:

- An **accurate**, functional measure of the soil's power to release (plant available) nutrients to your crop.
- A **customized** plan that will optimize each field's return and nurture a healthy crop.
- An understanding of the best crop options for each field.
- Haney and Solvita[®] Soil Test compatible program

Our Service Cycle

1) Initial Consultation

Start by discussing the needs of your farm business, review of our soil testing technology and confirm work for the upcoming season with our agronomist.

2) Soil Collection and Testing

Our agronomists will sample your fields and bring fresh soil samples to our lab to be tested.

3) Crop Optimizing Session

Using specialized software you and your agronomists will virtually try out a variety of scenarios based on the soil test company provides, agronomic practices and economic goals. Together, these form the foundation of a customized crop plan designed to optimize your crop yields, manage price and weather risks.

"I like how the test actually measures the amount of nutrient that is available to the specific plant, not just the amount present. This varies with different crops and the analysis can change what crop you may plant on a given field. I also like how you can change any of the nutrient inputs on the program and see the results instantly. It is much more than a soil test, it's another management tool that is well worth the investment."

Dwayne Brossart
Barton, ND
5 Year Customer

What we offer:

- **Complete Soil Testing Solution**
- **Precision Ag Services**
- **Personalized Crop Planning Service**
- **Independent, ND company with fast sample turn-around**
- **Resin Membrane Technology capable of precisely indicating plant available nutrients in soil.**
